# MUEHLBAUER GROUP AT A GLANCE

## MUEHLBAUER'S BUSINESS UNITS AND SITES

The **Muehlbauer Group** is a German high-tech company that is known worldwide for its innovative solutions in the field of automated production. With over 40 years of experience, Muehlbauer develops customized technologies for the future of industry and everyday life. The company is the secret driving force behind many developments that make our modern lives safe and efficient.

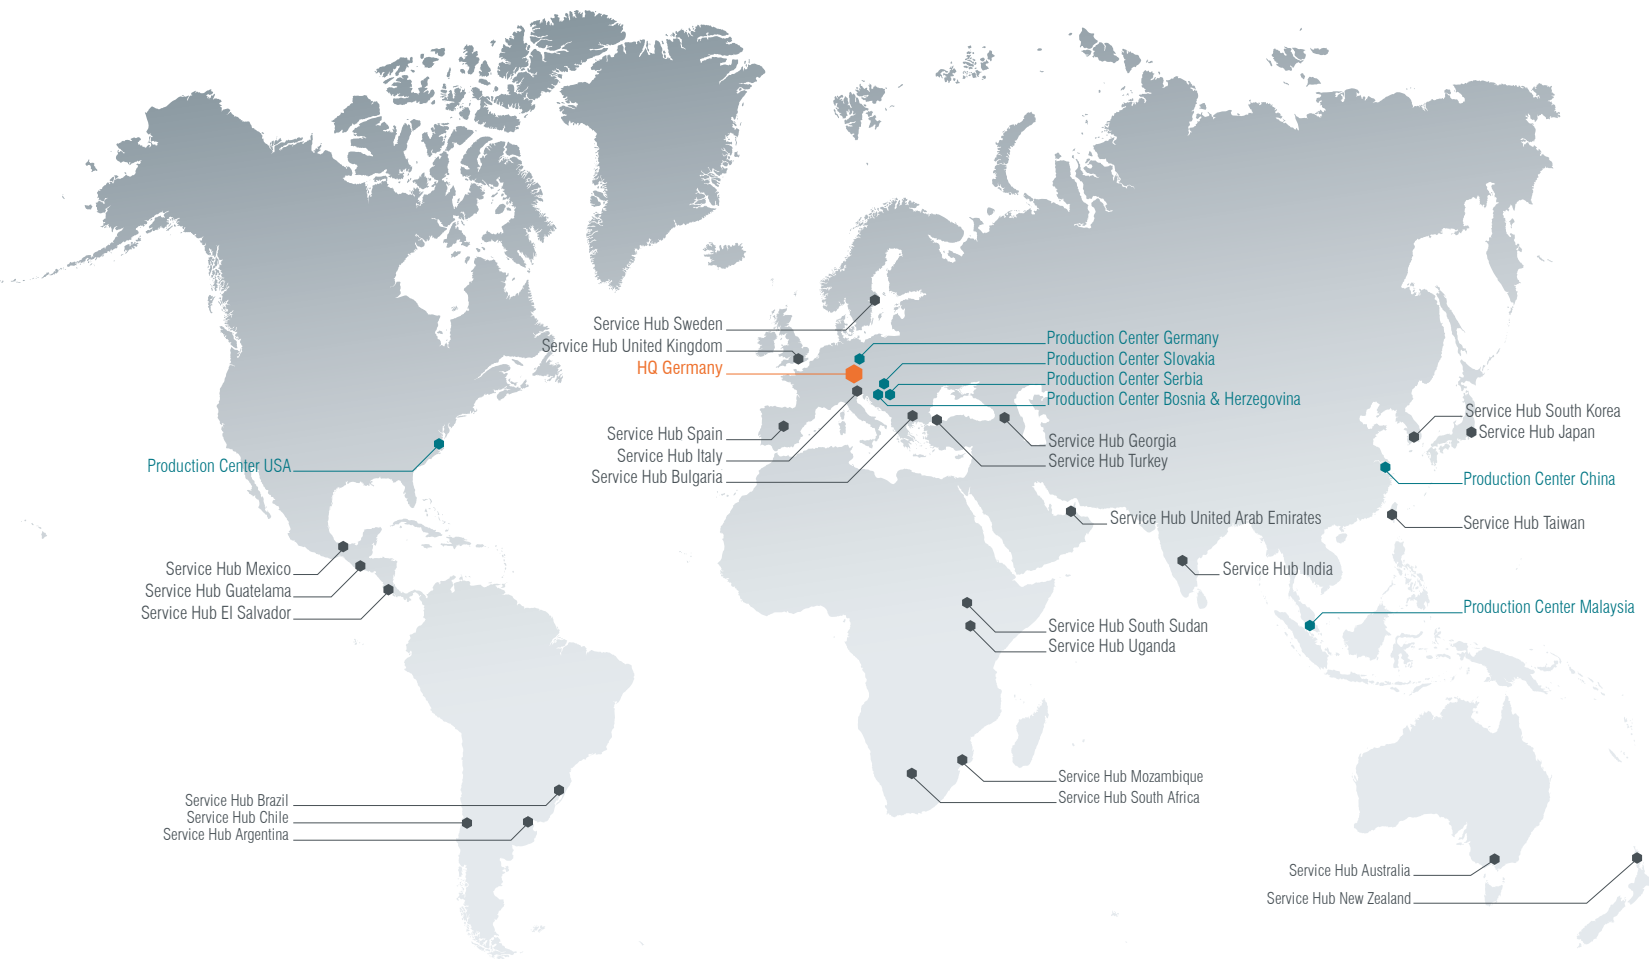

Since its foundation in 1981 in Roding, Bavaria, Muehlbauer has stood for maximum precision. The Muehlbauer **Parts & Systems** business unit consists of the company's own precision parts production with a state-of-the-art electroplating facility. All components for machines and other products are manufactured here in-house – individually and, if necessary, overnight! Our MPS makes us extremely agile and independent.

Our **AUTOMATION** division goes far beyond the assembly of customized production systems! We provide intelligent software solutions for the automation of different production steps and drive Industry 4.0 forward. We are passionate about serving 90% of the global RFID market with our high-speed bonders, and have achieved market leadership in the semiconductor industry with our unique die sorting technology.

Our newest and currently most dynamic division **ATECH** – Advanced Energy Technologies – brings unique machine requirements to series production. In the field of e-mobility, we offer highly efficient production lines for the manufacture of pouch cells and prismatic cells for lithium-ion batteries, as well as MEAs & stacks for fuel cells. Our newly built ATECH Giga Center with dry room provides optimal conditions for gigascale manufacturing.

Our **TECURITY®** division is the leading specialist when it comes to implementing innovative security systems for identifying and verifying documents and people. For example, we manufacture systems for the production of chip cards, IDs and passports or supply eGates and self-registration kiosks and the associated software for airports and border crossings. With more than 30 years of experience and over 300 successfully implemented ID projects worldwide, we offer our customers absolute expertise and trust at the highest level.

More than 4,000 employees at over 30 locations worldwide ensure that Muehlbauer's visions become reality around the globe. Sustainability, quality and unwavering trust in partnerships are the pillars on which our company has built its success story. Muehlbauer is not just a service provider, but a **creative problem solver** that shapes the future every day with innovative ideas and technological excellence.

# SMART FACTORY CONCEPT

## THE FUTURE OF RFID MANUFACTURING

Based on the machine innovations of Concept 2020, we have respected the needs of high-volume production combined with a sustainable green process and developed the **Smart Factory Concept**. The Smart Factory Concept is the roadmap for highly automat-

ed, sustainable production and material flow. Based on the intelligent production planning, the use of automated smart vehicles, preventive maintenance, and full production transparency, only a limited number of people are needed to run the system.

The integration of various manufacturing processes leads to stable and productive manufacturing lines that ensure high-volume production with consistently high yields and uptime. In addition, up to 30% less floor space is required. With our Smart Factory Concept, we combine the revolutionary

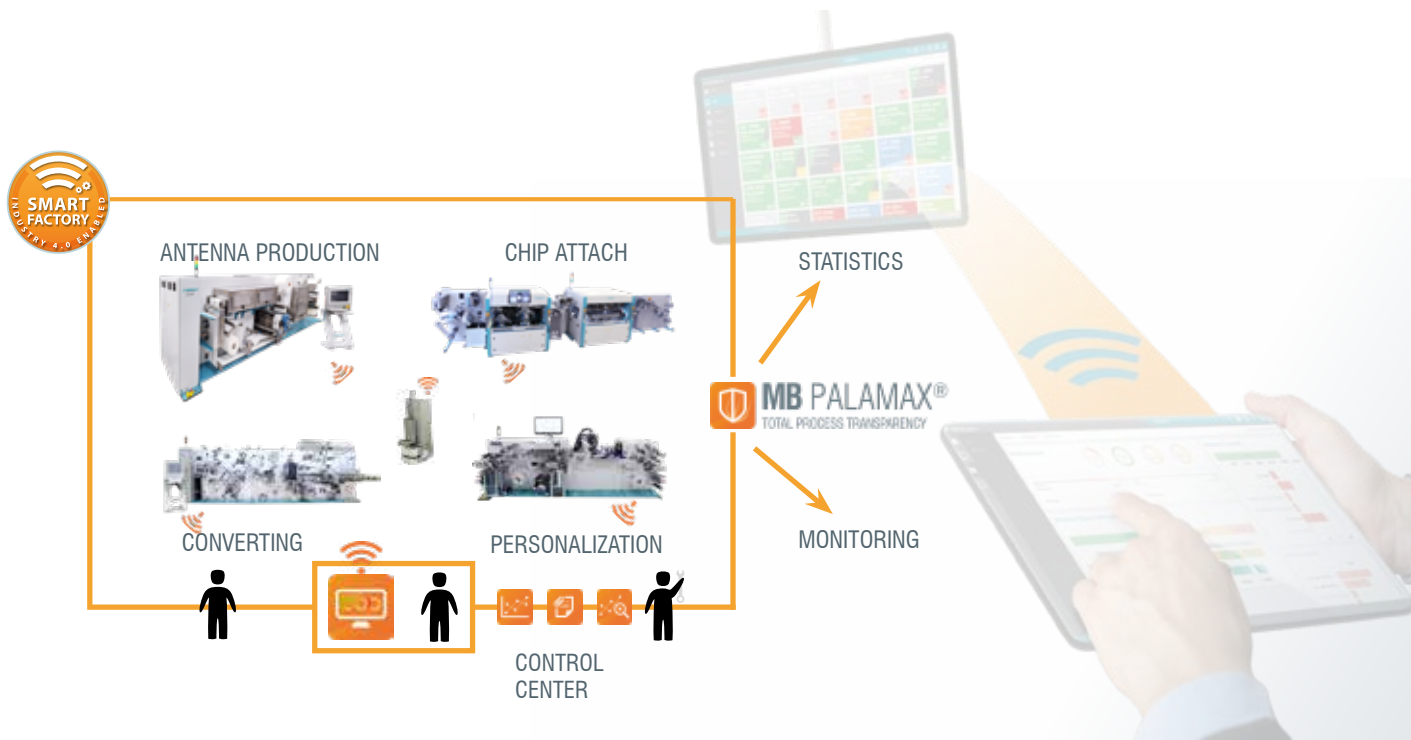

advances with our unmatched expertise to create a state-of-the-art technology, controlled and monitored by our proprietary software solution. We will do our very best to develop the technologies of the future and always provide you with the most competitive solutions.

# THE RFID FACTORY

## YOUR PARTNER FOR THE COMPLETE RFID SMART FACTORY

No one knows where the rapid growth of the RFID market will take us. Muehlbauer is able to provide you with the right technology to meet tomorrow's demands. Not only will supply chain compression, high UPH and yield be our challenge, in the future we will need to work on sustainable green manufacturing technologies and the decrease of process costs. Our Smart Factory Concept will provide the way to build a smart RFID factory In-

dustry 4.0 by having automated control of manufacturing data, material and process flow. This new factory concept will be able to be more productive in less space and will even further reduce costs. The entire process can be handled by just a few people and will guarantee the highest utilization of the installed capacity. Even non-Muehlbauer machines will be supported.

- Optimized material flow by automated vehicles for material transport
- Optimized machine utilization
- Preventive maintenance
- Support engineering in precise detection
- Fully automated data collection in real time
- Increased OEE and very fast ROI within months
- Significant reduction of manpower and floor space
- Full production transparency

SMART FACTORY CONCEPT

MB PALAMAX®

ANTENNA PRODUCTION

INLAY ASSEMBLY

CONVERTING

PERSONALIZATION

MB PALAMAX®, Muehlbauer's Smart Factory solution, is designed for card, tag or booklet production, personalization factories and semiconductor backend shop floors. Consisting of a NOSQL database, it is designed to set and collect process data to monitor and improve the efficiency of production and person-

alization. The collected process data is stored in big data sets for later processing, visualization and statistical analysis. MB PALAMAX® is the backbone of our Smart Factory solution, collecting all relevant data and handling the process & material flow.

### KEY FEATURES

- Monitor your production in real time and generate real production statistics with your preferred KPIs – for specific chip types only
- Improve your transparency
- Gain better data to explore, understand, and map process flows and relationships
- Run your production with improved security and optimally deployed, well-trained staff
- Intuitive and easy-to-use web interface
- Responsive user interface design allows optimal presentation on any chosen device
- Collect data from the shop floor of Muehlbauer equipment and third party equipment
- State-of-the-art big data software architecture ensures future-readiness

### FEATURES & ADVANTAGES

- MB PALAMAX.MONITOR**  
Monitors the real-time performance of the production
- MB PALAMAX.STATS**  
Statistical tool that analyzes collected data & delivers customized statistics on OEE
- MB PALAMAX.REMOTE**  
Enables the remote operation of machines on the shop floor from a control centre
- MB PALAMAX.TRACE**  
Allows for the auditing of single manufacturing runs
- MB PALAMAX.MAINTAIN**  
Enables the implementation of maintenance on demand
- MB PALAMAX.REPORT**  
Provides extensive reporting capabilities and data storage
- MB PALAMAX.RECIPE**  
Allows production engineering to prepare & test a repeatable factory setup. Factories can switch between products in minutes.

- The only software solution worldwide to combine personalization data management, complete production control and material management
- Covers the full production control requirements
- Highly automated workflows with little operator interaction
- Streamlined web-based user interfaces with easy localization

# ANTENNA PRODUCTION

## TECHNOLOGY OVERVIEW

Driven by the need for environmentally friendly production processes, fast and flexible production cycles, and high volume production capabilities, Muehlbauer has taken antenna manufacturing to the next level. The Antenna Printing System (APS)

is designed to provide zero waste production without the use of harmful chemicals. Muehlbauer's antenna manufacturing technology marks a milestone in supply chain compression, antenna on demand production, and total control over your design.

	APS 350

# APS 350

## ANTENNA PRINTING-SYSTEM

The completely new approach of the APS enables smart label suppliers to print their own antennas in-house on demand. The new process is cleaner and faster than any conventional antenna technology currently on the market. With the APS 350, copper

ink antennas can be produced under an integrated quality assurance system. The APS is especially interesting for smart label manufacturers who need a fast response time, as they can produce antennas in hours instead of weeks.

## PAPER SUBSTRATE ANTENNA ON DEMAND

### BENEFITS

- Fully decomposable copper antennas on paper
- Copper ink printing process with no chemical waste (green process)
- Enables two-layer products (green design)
- Cost savings of up to 70% compared to silver printing
- In-house antenna supply – just in time
- UHF production

## FEATURES & ADVANTAGES

### ADVANTAGES

- Supply chain compression (no shipping from sub-suppliers)
- Print-on-Demand flexibility (with existing design, production within 8 hours)
- Know-how remains in your company
- Tag disposal < 30 days in standard composter

DDA TECHNOLOGY

THE REVOLUTION IN FLIP CHIP DIE ATTACH – PROCESS FLOW

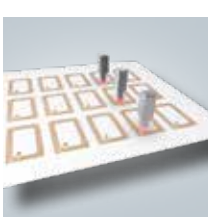

**ADHESIVE APPLY**

- Latest generation of adhesive jetting technology available
- Glue savings of approx. 25 % compared to dispensing system
- Highest flexibility for all antenna formats

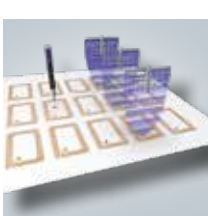

**PRE-BONDING**

- Machine accuracy ± 15 µm, die attach accuracy ± 30 µm
- Die handling from 0.2 x 0.2 mm up to 5.0 x 5.0 mm
- Full throughput with 100 % vision control for highest yield

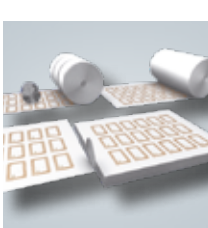

**FINAL BONDING**

- Smallest & most efficient thermode generation 0.5 N to 5 N ± 10 %
- Best thermode coplanarity ± 5 µm/mm
- Highest process accuracy ± 50 µm (after final bonding)

**TESTING & BAD UNIT MARKING**

- 100 % tested output quality
- In-house customized reader antenna design
- Muehlbauer standard tester
- Optional: CISC or Voyantic

**UPWINDING OR SLITTING**

- Single or multirow reels for label / ticket conversion

# DDA WF FAMILY

## FLEXIBLE TECHNOLOGY FOR EACH & EVERY VOLUME

The DDA WF family represents Muehlbauer's most proven and established chip attach solutions for the latest market potentials. The flexible technology ready for each and every volume is based on our well-known direct die attach concept and beats up to 80,000 UPH with only one system and smallest footprint. With

our state-of-the-art technology, you can enter at any production volume and have the flexibility to upgrade your inlay production machine to the next level. Production from 2 to 12 rows of antennas is possible with tape widths from 100mm to 385mm and 100 % high-quality output control to achieve highest yield.

## MOST PROVEN CHIP ATTACH SOLUTION FOR THE LATEST MARKET POTENTIALS

### BENEFITS

- Highest flexibility, in-field upgrade possible at any time
- Inlay production from 2 to 12 rows possible
- Tape width from 100 to 385 mm

## FEATURES & ADVANTAGES

### ADVANTAGES

- Highest flexibility for wide web chip attach production
- Future proven technology
- Upgradeable concept that grows with the market – even later in the field

### WORKSTATIONS

# DDA 40000

## ENTER A NEW DIMENSION FOR CHIP ATTACH

10 years ago, the Direct Die Attach concept was developed in Mühlbauer's R&D department and continuously optimized. The patented technology outperforms the 40,000 UPH with a single station system and a 30 % smaller footprint. The significantly higher

throughput and the reduced complexity result in 80 % lower die attach costs, outstanding quality and highest reliability. This system redefines the high-volume production and provides considerable potential for further cost and performance optimization.

## SIMPLICITY IS THE ULTIMATE SOPHISTICATION

### BENEFITS

- Production proven > 80 systems
- Cost reduction up to 80 %
- Very high productivity, over 10 billion products produced
- Fully compatible with standard curing process

## FEATURES & ADVANTAGES

### ADVANTAGES

- Consistently high uptime
- Small footprint
- High accuracy & quality standards

# DDA 40000 – P

## SUSTAINABLE PRODUCTION SOLUTION FOR PAPER ANTENNAS

Our sustainable Direct Chip Attach DDA 40000-P has been developed as a production solution for paper antennas. The system is based on our well-known Direct Die Attach technology and allows you to produce green inlays with the same flexibility and speed in your inlay production. The ability to handle transparent and non-transparent

materials gives you unlimited flexibility and prepares you for future material requirements. With 100 % high-quality output control, the machine can attach up to 280 million chips per year to antennas on paper substrates.

## GREEN PRODUCTION MEETS HIGH SPEED CHIP ATTACH

### BENEFITS

- Well-prepared for future material requirements
- Handling of transparent & non-transparent materials (e.g. paper)
- Fully compatible with standard curing process

## FEATURES & ADVANTAGES

### ADVANTAGES

- More pitch independent
- Cleaning paper from dust before processing in the machine (optional)
- High accuracy & quality standards
- Handling of green and environmentally friendly products

## PROCESS FLOW

### ADHESIVE COMPONENTS

- Transfer adhesive for wet inlays
- Hotmelt station for dry inlays

### LAMINATION

- Cold lamination
- Register mark controlled

### DIE CUTTING

- Rotary or semi-rotary die cutting process
- Fast and accurate
- Pitch controlled

### TESTING & MARKING

- 100 % tested output quality
- In-house customized reader antenna design
- Marking or rejection of bad units

### INLINE READ RANGE VERIFICATION/PERFORMANCE

- Inline performance test of UHF-inlays, -labels, -tickets etc. with Voyantic Tagsurance system
- Frequency test range (e.g. 860... 960 MHz) instead of one fixed frequency in standard test procedures
- Characteristic performance curve over the test range to evaluate quality & tolerances

ANTENNA PRODUCTION

INLAY ASSEMBLY

CONVERTING

PERSONALIZATION

# IL 30000

## RFID INLAY INSERTION LINE

The IL 30000 inlay insertion line is designed for the fully automatic insertion of RFID inlays into conventional self-adhesive labels. Label converters use their standard label printing presses to produce self-adhesive labels in a very efficient reel-to-reel process. By using the IL 30000, these labels can be easily con-

verted into Smart Labels by inserting "wet RFID inlays" between the adhesive labels and the liner in a stand-alone reel-to-reel process ("de-lam/re-lam process"). With minimal investment and very fast production integration, it is your door opener to the RFID world.

## FULLY AUTOMATED INSERTION OF RFID INLAYS

### BENEFITS

- Low investment costs and fast return of investment
- Easy in operation
- Highest placement accuracy
- Dual row solution possible

## FEATURES & ADVANTAGES

### ADVANTAGES

- Easy process solution with very small footprint
- High production speed
- Known process de-lam/re-lam
- Effortless expansion of your portfolio

### WORKSTATIONS

- Input spooler for self adhesive labels
- Wet inlay feeding and dispensing system
- Lamination
- Tester and bad unit marker
- Output spooler

### APPLICATION POSSIBILITIES

- Self-adhesive HF & UHF labels
- Multi-layer labels (sandwich labels)
- Can also be used as an applicator

### DIMENSIONS

PERSONALIZATION

# CL 40000

## CONVERTING LINE FOR MID-VOLUME PRODUCTION

The CL 40000 is a successful combination of cost-effective design with a high flexibility in output configurations. It is possible to convert wet inlays or finished labels directly from dry inlays in reel-to-reel mode with a wide variety of different adhesive options. All processes are in one modular system: antenna web handling, label lamination, die cutting as well as output inspection. The system has a throughput of up to 40 m/min for ro-

tary cutting. With optimized changeover time between different products, coupled with the lowest tooling costs, this converting system is perfectly suited for a production with smaller lot sizes and fast changing applications. The friendly user interface, the intuitive handling of this converting machine and the low initial investment make the CL 40000 especially interesting for entering the RFID market.

## BEST PRICE/PERFORMANCE RATIO FOR SMALL & MID-RANGE VOLUME

### BENEFITS

- Rotary Die Cutting
- Fast return of investment
- Reduced production time and costs
- Dry inlay with hotmelt possible
- Wet inlay dispensing
- Dual row solution possible

## FEATURES & ADVANTAGES

### ADVANTAGES

- Fast, easy & cost-minimized product changeover
- Easy in operation
- High precision inlay placement
- Small footprint

### WORKSTATIONS

- |                                  |                                   |

# CL 60000

## CONVERTING LINE FOR HIGH-VOLUME PRODUCTION

Muehlbauer's CL 60000 Converting Line represents a flexible, fast and modular concept for a wide range of converting possibilities: Smart Labels and Smart Tickets from reel-to-reel or from reel-to-ticket/fanfold. Various input materials such as dry inlay, wet inlay and even compensation layer (4-layer) can be processed. All processes are integrated in one platform: reel-to-reel antenna web handling, label/ticket lamination, die cutting

as well as output testing – of course with leading edge performance, state-of-the-art quality and the best cost/performance ratio available on the market. Muehlbauer's converting machine CL 60000 is perfectly suited for high-volume RFID Label and Ticket production, where fast changeover times and high quality are required.

## MOST FLEXIBLE MODULAR CONVERTING SOLUTION

### BENEFITS

- Price / Performance leader
- Highest level of customization
- Lowest cost of ownership
- Flexible for labels, tickets and hangtags
- Dual-row solution

## FEATURES & ADVANTAGES

# PERSONALIZATION

## TECHNOLOGY OVERVIEW

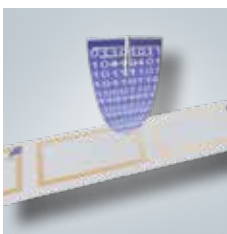

Personalization brings each label/ticket to life and with our wide range of solutions, it's the ideal machine for chip encoding, printing and verification. The efficient and fast set-up allows for a rapid changeover. With transport speeds of up to 60m/min, the

systems achieve peak-performance in terms of UPH. To guarantee 100% flawless output quality, 100% of the labels/tickets are tested for functionality and prints. The license-free encoding gives you maximum flexibility for all encoding formats.

# CHIP ENCODING & PRINTING

## PROCESS FLOW

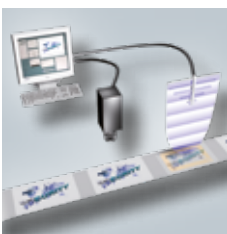

**ENCODING**

- Electronic encoding of data on each tag's RFID chip
- Data base with all relevant information
- For advanced encoding features such as password lock, perma lock and more

**PRINTING**

- High-speed digital printing system
- Monochrome or full color
- Variable Data-Printing (VDP) capability

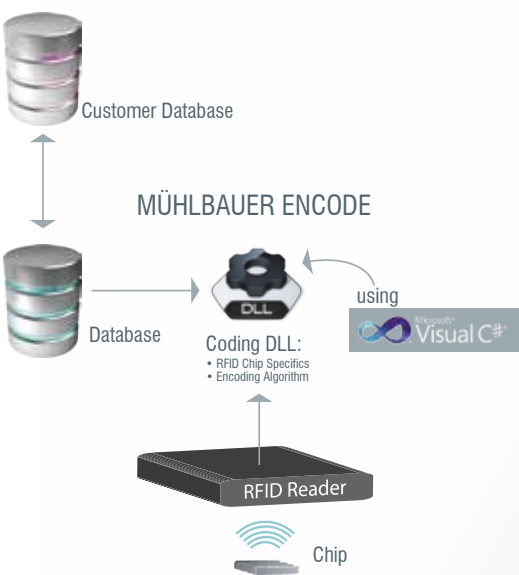

**VERIFICATION & TESTING**

- Every label will be tested for RF functionality and/or visual defects and/or data match
- Bad labels can either be visually marked or completely removed from the roll

MUEHLBAUER ENCODE FOR  
MAXIMUM FLEXIBILITY AND  
INDEPENDENCE

The personalization software MUEHLBAUER ENCODE is based on Microsoft Dynamic Link Library (DLL) and therefore allows the adaption to any RFID Chip and encoding algorithm.

### YOUR ADVANTAGES

- Suitable for all chip types with unique ID (TID or UID)
- For all frequencies (HF/NFC & UHF)
- Encoding algorithm is freely programmable

The DLL is based on Microsoft Visual C#. At the Muehlbauer Academy, customers receive specialized developer trainings for the coding of the DLL. Our developer workstations are equipped with an offline RFID reader kit for HF and UHF frequencies and are available for testing and debugging.

# PL FLEX

## SINGLE TICKET / REEL-TO-REEL PERSONALIZATION LINE

Muehlbauer's PL FLEX personalization line is the ideal machine for encoding, labeling and verification of tickets and tags in low and medium volumes. Efficient set-up and fast changeover allow for quick job changes, either reel-to-reel or ticket-to-ticket. Multiple job processing is also possible. Each ticket is tested and automatically reproduced if rejected in order to guarantee

flawless quality and lot integrity. The PL FLEX's small footprint allows it to fit into the tightest of spaces, such as an office environment. Furthermore, this affordable system is available with the license-free Muehlbauer ENCODE software solution for UHF and HF/NFC, which further reduces operational costs.

## FEATURES & ADVANTAGES

### ADVANTAGES

- Wide range of encoding formats for UHF and HF/NFC
- License-free MB ENCODE: Suitable for almost all chip types
- Ready for Industry 4.0 and the MB Palamax Software solution

### WORKSTATIONS

- |  |  |
|--|--|
|  Input spooler  |  Printing       |
|  Trigger sensor |  Verification   |
|  Barcode reader |  Output spooler |
|  Encoding       |  |
